Section 1
NATURE OF THE GRP

INTRODUCTION

These Guidelines are prepared and designed to help MBA students of SOMTU in the preparation of their GRP report. The guidelines address only matters of format and presentation such as arrangement of content, paper, spacing, headings, data analysis, interpretation and referencing. It is the responsibility of each student to ensure that his or her work conforms to the Guidelines set out below. The final GRP is approved by the concerned supervisor and the Research Committee with regards to questions of quality and content. Further clarification of the Guidelines can be obtained from the Director of SOMTU.

OBJECTIVES OF THE GRP

The graduate research project (GRP) is an integral part of the postgraduate studies at SOMTU. Towards the end of your study at SOMTU, you are required to undertake a research assignment and prepare an integrative research report in any areas of management as approved by SOMTU.

The GRP explores business questions as they relate to industries, business climate, and management practices, focusing on findings in related research plus the methodological alternatives. The GRP thus involves conceptualizing planning implementing and writing up a report, which extends knowledge in the subject area under investigation.

This assignment specifically aims to develop knowledge, skills and attitudes necessary for conduct of individual research at a level which will make a distinct contribution to knowledge. You are expected to demonstrate the use of appropriate research methodology, and written skills through the preparation and presentation of a substantial investigation.

Specifically, the objectives of the GRP include;

- To provide an opportunity for the student to integrate classroom knowledge and practice.
- To enable graduate students to do an independent study to reflect a creative Endeavour that can make a significant contribution to knowledge in a given field.
- To develop student's ability to read professional literature, report and other works critically in their design, treatment of data, and conclusion.

- To strengthen the ability of students in presenting their research work in a clear, concise and logical manner and enable other readers to use the results of their investigations.

ACTIVITIES INVOLVED IN THE GRP

The following activities will be involved in the GRP

- Selecting a relevant topic or issue for study.
- Locating the relevant literature.
- Locating the sources of information.
- Extracting the relevant information from these sources.
- Identifying the various dimensions of the problem or issue.
- Organizing and analyzing the data effectively.
- Drawing inferences and conclusions.
- Writing a report.

STUDY REQUIREMENTS

Your GRP report shall comply with the following requirements.

- The proposed field of study or topic of research must be approved by the concerned supervisor and the Director of SOMTU.
- The work must comply with any requirements a advised by the concerned supervisor.
- The work in a GRP must reach a satisfactory standard of expression and presentation.
- You must maintain close and regular contact with your supervisor and the Director of SOMTU.

REPORTING REQUIREMENTS

You shall prepare a GRP report embodying the results of your research. The report submitted by you shall.

- Be an accurate account of research.
- Relate to the approved research topic.
- Not include work which has been submitted for any other academic award.
- Be written in English.
- Achieve a satisfactory standard of expression and presentation.
- Acknowledge any substantial assistance provided to you during the conduct of the research and writing the report.
- Conform to the rules and format of SOMTU for the presentation of the GRP report.

LENGTH OF THE GRP REPORT

The length for the GRP report shall be around 18000-20000 words (approximately 70-75 page). This length is exclusive of the materials included in appendices.

MULTIPLE COPIES REQUERED

- You shall submit two loose-bound copies of GRP report to SOMTU for evaluation. After satisfactorily completing all recommended corrections, you shall submit two hard-bound copies and one electronic copy. Each hard copy shall be bound black.
- The duplicate copies of the original are to be produced using a method which gives a clear and permanent copy (laser copy). The use of spirit duplication or carbon copy is not acceptable.

EVALUATION OF THE GRP REPORT

The GRP report shall be evaluated by two examiners, one of whom shall be the faculty member of SOMTU. The internal examiners shall be appointed by the Director of SOMTU and the external examiner by the Examination section, office of the Dean, Faculty of Management in consultation with the Director of SOMTU.

You will be required to attend the viva- voce examination and defend your work. You will also be required to give a seminar presentation of your report as organized by SOMTU. The weight age given for viva and the GRP report will be 40% and 60% respectively.

Section 2
GRP PROPOSAL

- Having to prepare the proposal for your GRP is part of your graduate training. It is an opportunity to organize your thoughts about your research topic, to decide how you will pursue the work, and to spell out what resources (financial, material, and technical) you need to carry out the research. A GRP proposal seeks to convince the supervisor(s) or the Graduate Research Committee (GRC) that the research project is feasible.

- The writing of project proposal is an exercise that you will repeat many times in your professional career. The ability to "sell" a project convincingly is a crucial part of your toolbox of skills.

- A clearly defined research problem (or question) is central to the success of a research project. It helps you to determine that your project is doable before you begin writing the GRP report.

- The proposal should explicitly state the problem being addressed or gap in knowledge to be filled, describe the objectives and research techniques to be employed, and include a review of the principal relevant published literature.

- The proposal needs a thread of logic. It should build from a statement of the research problem or gap in knowledge, and follow an outline of detailed objectives that must be achieved (or questions that must be answered) if the problem is to be solved. The presentation of methodology should be clearly connected to the stated objectives.

- A GRP proposal usually contains some formulations of the following sections :

    - Statement of the research problem
    - Research objectives
    - Research questions or hypotheses
    - Rationale for the research project
    - Related literature.
    - Theoretical/conceptual framework
    - Methodological design – a plan outlining how and when each step of the GRP will be done
    - Expected outcomes
    - References

- Maximum length of the proposal should not exceed 3000 words (excluding references, figures or tables).
- GRP proposals shall be reviewed by the GRC of SOMTU. The GRC may either (a) accept the proposal as written or (b) return proposal for revision.
- Although you are expected to seek guidance from your supervisor in the choice of topic and the method of solving the problem involved, the responsibility for the proposal writing lies with you. You will as far as possible, work independently and demonstrate the ability to plan and outline an acceptable research project.
- Upon approval of the proposal by the research Committee, you will be enrolled in the GRC.

Section 3
GRP REPORTING FORMAT

As an MBA student at SOMTU, you are required to write reports for different project assignments in different courses. However, the GRP report writing is different from other reports. It is an organized, issue-focused, evidence-based and creative piece of academic writing. Hence, the following structure and guidelines have to be followed while preparing your GRP report.

STRUCTURE OF THE GRP

You must carefully read your course information details to ensure that you comply with what the instructor stipulates. A GRP report is typically made up of three main division (1) preliminary (2) body, and(3) supplementary . Each of the sections contains different kind of contents.

Appendices

BODY OF THE GRP REPORT

- **Introduction -** Background information on the topic so that you able to 'place' your research in the context. Details are given of your problem statement, objectives, hypotheses, scope and significance, definition of terms, limitations and an outline of the structure of the GRP report.
- **Related literature and Theoretical Framework –** You must carefully structure your findings of the literature survey. It may be useful to do a chronological format where your discuss from the earliest to the latest research, placing your research appropriately in the chronology. Alternately, you could write in a thematic way, outlining the various themes that you discovered in the research regarding the topic. Again, you will need to state where your research fits. Finally, at the end of this chapter, you present your theoretical framework, briefly explaining the measurement of variables.
- **Research Method –**You have to clearly outline what methodology you used in your research i.e. what you did and how you did it. It must be clearly written so that it would be easy for another researcher to duplicate your research if they wished to. The contents of this chapter may include research design, population and sample, instrumentation sources and methods of data. Collection and data analysis.
    - It is usually written in a' passive' voice (e.g. the participants were asked to fill in the questionnaire attached in Appendix 1) rather than an 'active' voice (e.g. I asked the participants to fill in the questionnaire attached in Appendix1)
    - Clearly reference any material you have used from other sources. Clearly label and number any diagrams, charts, and graphs. Ensure that they are relevant to the research and add substance to the text rather than just duplicating what you have said. You do not include or discuss the results here.

- **Analysis and Results –** Data are analyzed statistically and results are presented and interpreted. Hypotheses are tested. This is where you indicate what you found in your research. You give the results of your research. Based on these results you give your interpretation. You also discuss the relevance of your results and how your findings fit with other research in the area. It will relate back to your literature review and your introductory GRP problem statement.
- **Discussion, Conclusion and Implication**
- **Discussion of the Finding**- This section is the most important section of your GRP report. Make sure that you allocate enough time and space for a good discussion. This is your opportunity to show that you have understood the significance of your findings and that you are capable of applying theory in an independent manner. The discussion will

consist of argumentation. In other words, you investigate a phenomenon from several different perspectives. To discuss means to question your findings, and to consider different interpretation.

- **Conclusions and Implication –** This includes key facts from your research findings to help explain your results as needed. You have to summarize, compare and evaluate your research results in the context of existing theories, and make comments about its success and effectiveness.

  An implication refers to something which is implied or suggested as naturally being inferred or understood in a certain policy or practice. Your research needs to identify why and how the analyses and interpretation were made and the way key concepts in the analyses evolved. In addition, You need to inform the reader of any unexpected findings or patterns that emerged from the data and report a range of evidence to support assertions or interpretation presented.

  You could also indicate some areas where your research has limits and where further research would be useful. Implications of the research for furthering understanding of the research problem need to be are explored.

Section 4
REPORTING THE DATA AND PRESENTING RESULTS

Once you have obtained, entered and tabulated the data collected from the field, the next step is to analyze and interpret the results. The following sections intend to help guide GRP report writing. The numbers in the examples that follow are fictional and used solely to provide examples. The sample formats can be used as a template for similar questions. Just be sure to change the numbers and wording to reflect your data. These examples are not exhaustive, but do address the fundamental components that should be included in reporting results.

PRESENTING THE DATA TABLES

- Tables are one of the most efficient ways of presenting data. The figures in the rows and columns show results that enable the reader to see the raw data and if necessary, use the information for further calculations. A table can hold far more information than a chart and remain intelligible. They do, however, require the reader to work on the data more than in a chart.
- Tables should be used wherever :
    - There is a considerable amount of information which would become over complicated in a chart or diagram.
    - The figures in the table are important and the reader may require them for further computations (as in a company's financial accounts or in currency conversion table)
- A table should quickly communicate a pattern of information to the reader.
- Look at figure 4.1 and see how many ways you could improve it. Represent the table and compare your results with Figure 4.2

DEFECTIVE TABLE CONSTRUCTION

Figure 4.1 Dissatisfaction with motor, personal accident or sickness and holiday insurance

	Motor	Acc/sick	Holiday
Unweighted base ;those dissatisfied	149	28	33
Cause of dissatisfaction	%	%	%
Misled by broker/salesman into			
Taking unnecessary/expensive policy	1.2	16.3	0
Special conditions imposed (inc. excess)	6.45	7.0	6.6
Cost of policy/premium increase	39.3	27.4	11.4
Claim not covered by policy	1.6	9.9	15.2
Claim not met in full	6.7	17.4	17.1
Long delay in dealing with the claim	19.8	19.1	29.0
Other Complaints	26.9	12.6	10.2
Not stated	6.1	10.8	24.4

IMPROVING THE TABLE CONSTRUCTION

There are least seven ways in which Table 4.1 could be improved:

- **The title** The title should clearly and succinctly say what the table about. The title of the table is too long and would be better shortened to "Reasons for Dissatisfaction with insurance policies."

- **The Column headings** The column headings, though short, are not altogether clear. What precisely dose acc/sick mean? There is no heading at all over the left hand column.

- **The rows** The first row of the data is likely to cause a problem for most readers .What exactly is meant by "unweighted base; those dissatisfied "? The table presents findings from a survey of people with different types of insurance and the words "unweighted base"would have been far better to have simply said "sample size" or number of respondents".

- **Ordering of the rows** The whole point of the table is to show which issues cause dissatisfaction with insurance policies. Therefore, it would be easier for the reader if the rows were listed in declining order of importance. If the rows are not ordered, readers have to work hard to do this by themselves.

- **The labeling of the rows** The labels on the rows look as if they have been lifted straight from a coding sheet and have not been smartened up in any way. They could be improved by shortening and with capitals at the beginning of the line.

- **Labeling of the sum of the columns** Most people looking at the table would wonder if the results, being percentages, should add to 100% . If someone ran this check they would find out that each column adds to more than 100%. This is because this is a "multi-response" question to .which more than one answer could be given. It would help if there was an explanation to this effect.

- **Source of the data** Without knowing where the data has come from or when it was published, we cannot judge its authenticity.

THE IMPROVED TABLE

Figure 4.2 Reasons for dissatisfaction with insurance policies

	Type of Policy			
Cause of dissatisfaction with policy	Total %	Motor %	Accident/sickness %	Holiday %
Cost of policy/ premium increase	33	39	27	11
Delay in dealing with claim	21	20	19	29
Claim not met in full	10	7	17	17
Special conditions imposed	7	6	7	7
Claim not covered by policy	5	2	10	15
Misled into unnecessary/expensive policy	3	1	16	0
Other complaints	22	27	13	10
Not stated	10	6	11	24
Total	*	*	*	*
Sample size (those who were dissatisfied)	210	149	28	33

*Multi – response therefore total exceeds 100%

Source : United Management consultants (2004). Attitudes of policyholders towards insurance Policies, Kathmandu.

REORTING THE DATA

If you have a lot of information to report, it can be easy for readers to lose track of your main findings and conclusions. Make your key findings stand out, so that your audience can easily find them and determine their significance and usefulness. The following are examples of standard reporting practices that will help your audiences understand and follow the findings.

- Be as specific as possible about who is reporting and what they are reporting on. Try to use wording that is as similar to the question asked ads possible. For instance:

  Fifty percent of the employees "agree" or "strongly agree" that there is a lot of flexibility when decisions are made.

  The majority (65%) of teachers implementing Higher Education project – Nepal believe that the content for the curriculum was very appropriate for their students.

- Report result from largest to smallest for multiple questions related to one another. This is generally the easiest way to read this information. For instance :

  Seventy percent of participants of the responsible beverage server training reported that they felt the overall quality of the training was high. Sixty percent reported that the training will be beneficial to them in performing their job.

- Know when to report in percentages and when to report in numbers. In general, we recommend using percentages to report information for samples with more than 10 respondents. For samples with less than 10 respondents, use numbers.
  For instance:
  Of the 12 employees who were surveyed in December 2012, 78 percent reported that they feel strongly committed to the new policy.

  Of the eight members who participated in the survey in August 2012, seven" strongly agree" or "agree" that they feel strongly committed to the new policy.
- Keep tables and graphs as clear and simple as possible. This narrative and table might look like the following:

Most of the youth staff participants like the job they were assigned and had fun at their job . Participants reported being unclear about the program rules though (see the following).

New policy implementation environment questions (N=20)

	Strongly Disagree	Disagree	Agree	Strongly Agree
The implementation climate seems to be "right" for the new policy accomplishing its goals.	5%	25%	40%	30%
In the organization, there is a big need for quality awareness programs and services.	10%	10%	30%	50%

REPORTING MULTIPLE CHOICE QUESTIONS

Most of the questionnaires use scales such as "Strongly agree" "Agree," "Disagree," and "Strongly disagree," the agreement and disagreement categories can be combined to simplify the reporting of findings. That is," 'Strongly agree" and "Agree" numbers or percentages can be added together, while "Disagree" and "Strongly disagree" numbers or percentages can be added together For example, if 20 percent of participants "strongly agreed" and 40 percent "agreed" that responsible beverage server training should be required for all alcohol beverage servers, you might report that:

Sixty percent of the training participants believe that training should be required for all waiters serving food to customers.

"Sixty percent (N=18) of the sample either strongly agreed or agreed with the statement that the holiday season tends to cause a great deal of anxiety."

Other examples include:

Most of the teachers who taught Management Accounting, 78% were comfortable teaching the course.

Of the 15 teachers teaching Management Accounting course,62 percent thick that their students were interested in the information shared.

When asked whether they would recommend the curriculum to other teachers,72 percent of teachers agreed, while 28 percent of teachers disagreed.

Employees tend to believe that other members want the New Educational policy to succeed (80%) , have a high level of commitment (76%) ,and communicate openly with one another (64%).

REPORTING COMTINUOUS DATA

Another form of data that may be reported is continuous data (e.g., months, year, hours, and numbers of participants). You will know you are working with continuous data if the data summary provided in your Excel file includes a minimum, maximum, and average score rather than counts for each response option. Here are some suggestions for reporting this type of information.

Employees reported being involved with the implementation of the New Educational policy for between six months and five years (average =2 years)

Employees reported spending an average of four hours a month on awareness building activities outside of meetings.

Sixty percent of employees reported that they were involved with the new Education policy for less than one year, while 40 percent reported more than one year of involvement.

REPORTING OPEN-ENDED QUESTION

Some surveys also include open-ended questions, such as questions eliciting suggestions for improvement or level of interest in participating in an activity. Often open-ended data is used to support other quantitative data. For instance:

Eighty percent of participants in the responsible beverage server training felt that this training will be beneficial to them in performing their jobs. When asked what they will do differently as a server as a result of this training, one participant stated," I will know what to say when I feel someone is too drunk for another drink" while another said," I will be *more invested in checking IDs from everyone in the bar."*

Open- ended data may be presented with a verbatim list of responses or you may choose to code the response. However, you may decide that your open-ended responses are more appropriate for internal use than external reporting and not report them. It is up to you and the requirements for your reports.

VERBATIM LIST

Open- ended responses can be reported as stand –alone data in the form of a list of verbatim responses. This is especially useful if you have less than 10 responses to any particular question. If you list responses verbatim, be sure to "de-identify" the responses by removing any words or

phrases within the response that could identify the respondent and replacing the identifying information with a general reference in brackets. For instance:

Employees were asked why they decided to participate in the Bagmati Cleaning Campaign. Their responses include:

"I saw people covering their nose with a piece of cloth and walking and I felt very bad about it."

"I joined the Campaign because [another member] told me what great work the Bagmati Cleaning Campaign was doing."

"I work for an organization which is very sensitive towards its social responsibility."

CODING

Finally, you may also choose to organize the open-ended comments into codes or themes. This process can be somewhat more complicated than simply listing responses, but can be very useful if there were a lot of respondents. Coding responses into themes is also helpful for identifying common ideas expressed by the respondents.

To code open-ended responses, first create a comprehensive list of all responses to a particular question. Next, read through the responses and identify themes (patterns of responses) that are emerging in the responses. These themes will be the codes you will use. Assign a code to each response given to the question, like "outcome" or other members". Every response should fall into one of the code categories. Try to avoid using a code of "other" or" miscellaneous" unless absolutely necessary. Finally, list the codes in order from most common to least common, or identify the number of respondents whose responses reflect the same theme.

As an example of this process here are the responses and possible codes (in brackets) to the question: What has been the most worthwhile aspect of your participation in the Bagmati Cleaning Campaign.?

"Working with others who are sensible"[other members]
"Seeing changes in the attitudes of our youth"[outcomes]
"Becoming a part of the community "[community involvement]
"Hearing about people's common interest in the campaign"[outcomes]
"Networking at meetings held every Saturday "[other member]

If you choose to code responses, there are different ways you can report the data you may choose to report only the themes themselves, report individual comments organized by theme, or report the number of respondents who mentioned a particular theme. The following provides three examples of each reporting option, using the sample open-ends provided above.

REPORTING THEMES

Simple Themes

Members of this Campaign feel that the most worthwhile aspect of their participation includes .

Meeting and working with other social activists.
Seeing positive outcomes due to our work
Being involved more in the community.

Comments Organized by Themes

Member of this Campaign feel that the most worthwhile aspect of their participation includes:

- Meeting and working with other social activities :
  "*Working with others who care"*
  "Networking at meeting"
- Seeing positive outcomes due to our work:
  "*Seeing Changes in our youth"*
  "Hearing about people's common interest in the Campaign"
- Being involved more in the community :
  "*Becoming a part of the community"*

Numbering of Respondents who Mentions Particular Theme

Members of this Campaign feel that the most worthwhile aspect of their participation includes :

Meeting and working with other social activities.(N=2)
Seeing positive outcomes due to our work (N=2)
Being involved more in the community. (N=1)

In instances where you have a long list of themes, you may want to choose a threshold of responses to report. For example, if you have 40 themes, you may only want to list the top 10, or report those themes that were indentified by at least 5 respondents. If you choose one of these strategies, be clear in your report about what you are or are not reporting.

INTERKPRETING THE DATA

Example 1

Reporting data

Only 26 percent of the employees interviewed reported knowing how to handle emergency procedures like industrial accidents, fire and earthquake events.

Interpreting data

This finding shows how unaware and unprepared the employed the employees are in handing emergency situations and illustrates that perhaps efforts to provide emergency training for employees need to be stepped up by organizations.

Example II

Reporting data

The majority of the respondents (75%) said that they had to wait for more than an hour before being to board a bus at Ratna Park in the evening, between 4 pm to 7pm.

Interpreting data

The finding indicates that the frequency of bus service in the evening peak hours is inadequate in Kathmandu.

Section 5
LANGUAGE, TYPING, EDTING AND FORMATTING

KEEP THE LANGUAGE CLEAR AND STRAIGHTFORWARD

- Avoid jargon and acronyms, especially those terms which might be common within your field work but might be unknown to the general public.
- Use clear and concise writing, and include charts and graphs where appropriate.
- Keep sentences and paragraphs short.
- Delete unnecessary words and phrases.
- Use active verbs as much as possible.

MAINTAIN OBJECTIVITY

- Do not use emotionally charged language when describing your findings, like "very" or extremely." This can make you sound like a program advocate, thus reducing your objectivity and credibility.

- Use disappointing results to guide recommendations for enhancing services or addressing implementation barriers, rather than dismissing or hiding them.

- Discuss limitations in terms of how information was collected, so that audiences can judge the degree of confidence to place in the results. Every evaluation study has limitations, and it is important to know what they are so stakeholders can consider the findings in context.

TYPING AND EDITING

- The GRP report shall be a typescript paper document. It shall not only be submitted in an electronic format.

- The GRP report is not be typed on ISO A4 size white bond paper. If diagrams, maps, tables and similar presentations do not fit readily on this sheet size, ISO B4 size may be used .B4 size pages are to be folded and bound so as to open out at the top and the right.

- Typing is to be done on one side of each sheet only, with pages numbered consecutively throughout the report. The following minimal margins are to be observed :

  . Left 3.5cm
  . Top 2.5cm
  . Bottom 2 cm
  . Right 2 cm

- The GRP report must be 1.5 spaced. Single spacing may be used only in the Table of Contents, footnotes and endnotes, charts, graphs, tables, quotations, appendices, and reference.

- Text material should be typed on one side of the paper. The manuscript is to be neat in appearance and without error.

- Typing should be done using the Times New Roman and font size of 12 or equivalent, except for text for in the tables.

- SOMTU expects a high standard of editing of the work submitted to it for examination.

FORMATING

- Reporting writing format should follow the APA of citation and references.
- Except for text in the tables, all other text must always be justified.
